### XENARTHRA

### **Instructions to authors**

**Xenarthra** – formerly *Edentata* – is published by the IUCN SSC Anteater, Sloth and Armadillo Specialist Group (ASASG). It is published as an online, open-access and peer-reviewed journal and aims to publish information that contributes to the conservation of xenarthrans. **Xenarthra** accepts manuscripts of original research findings related to any aspect of xenarthran conservation. It also encourages submission of short communications and field notes. A broad range of topics is welcomed and encouraged, including taxonomy, systematics, genetics, biogeography, ecology, conservation, behavior, and health. All manuscripts must clearly demonstrate how they relate to, or benefit, the conservation of xenarthrans. Manuscripts must describe original research findings that have not been published or submitted simultaneously to other journals. Any overlap of contents with already published papers should be minimal.

### **Licensing information**

*Xenarthra* adheres to the <u>BOAI</u> definition of open access. By submitting their manuscripts, authors agree to grant *Xenarthra* a non-exclusive license to publish their work under the terms of the Creative Commons Attribution NonCommercial License (<u>CC-BY-NC</u>). This license allows others to copy, distribute, remix and adapt the articles, however not for commercial purposes, as long as they give appropriate credit to the original authors and the source of publication.

# **Copyright terms**

Authors retain the copyright to their work; they warrant that submitted manuscripts are original, that have not been published previously, and that are not under consideration for publication elsewhere. Authors must obtain the necessary permissions and attribute the source if any copyrighted material is included in the submitted manuscript.

### Language

Manuscripts may be written in English (please use American English), Portuguese or

Spanish. Authors whose first language is not English should please have their texts *carefully reviewed* by a native English speaker or a professional translator.

### **Review process**

Once the manuscript has been received, the editors will perform a first evaluation. Manuscripts not satisfying the editorial instructions will be returned to the corresponding author without review. Manuscripts that comply with the editorial instructions will be assigned to an editor. The editor in charge will select at least two external reviewers who are specialists in the topic of the manuscript. Once the external reviews are received, the editor will inform the corresponding author about the results of the evaluation and the decisión on merit for publication. The editor will also inform the corresponding autor about the steps that need to be taken in case the manuscript has been accepted for its publication. Please note that to avoid confusions, the editor will only communicate with the corresponding author but not with co-authors.

#### **Conservation research ethics**

When submitting their work, authors must confirm in writing that their research protocols have been approved by an authorized animal care or ethics committee and/or the authors had the necessary permits to carry out their research. Authors must be aware of, and adhere to, all laws, treaties and regulations currently applying to their work.

### **Editorial instructions**

### **Format**

Please type all parts of the manuscript (including references, figure and table legends, and appendices) in 12-point font, Times New Roman or Arial. Justify the text to the left and double-space it throughout. Do not use footnotes.

Number all pages, including the title page, in the lower right corner. Insert "Line Numbers" continuously for the whole document. Submit the main text as a DOCX, DOC or RTF file, and the tables and figures in separate files.

#### Style

The style of writing should be simple and concise. Avoid large, complex sentences that are

difficult to read.

### Words in other languages

Words in other languages, including allowed abbreviations, should be written in italics.

#### Nomenclature

The taxonomic nomenclature must follow the updated rules and recommendations of the International Code of Botanical Nomenclature and the International Code of Zoological Nomenclature. Scientific names, of generic or inferior category, must be written in *italics*.

## **Equipment and drugs**

Indicate the name, city, and country of the manufacturer in parentheses for all equipment and drugs. Example: spring scale (Pesola AG, Baar, Switzerland).

In the case of drugs, also indicate the product name. Example: 5 mg/kg enrofloxacin (Enrofland, 100 mg/ml; Laboratorios Veterland Ltd., Bogotá, Colombia).

The chemical names of drugs, such as anesthetics and antibiotics, must be written in lower case (e.g., ketamine instead of Ketamine).

### **Abbreviations**

Use the decimal metric system for all measurements. Abbreviate units of measure when preceded by a numeral and write them out in all other cases (e.g., 5.4 m or several meters). Spell out numbers at the beginning of a sentence. Also, spell out all numbers under ten unless they are associated with units of measure. Example: three armadillos, one sloth and 12 anteaters.

Express fractions as decimals (e.g., 0.25 instead of ¼). Use a decimal comma in Spanish and Portuguese, and a decimal point in English texts. The symbols > and < may be used if accompanied by a dimension (e.g., <2 m).

Abbreviations should end with a period, except those corresponding to measurements and distances, such as kg, m, km,  $\mu$ m, which are symbols. Use the abbreviation Fig. or Figs. when referring to figures within the text (e.g., Fig. 1, Figs. 2–4; as shown in Fig. 2...).

Leave a space between numbers and their dimensions (e.g., 2 km or 07:15 hr; do not write

2km or 07:15hr).

Report dates in the day – month (spelled out) – year format, with no period or comma (e.g., 25 August 2010). Use the 24-hr system for time, followed by the abbreviation "hr" (e.g., 07:15 hr or 21:00 hr).

Please indicate geographical coordinates in degrees, minutes, seconds and, if necessary, fractions of seconds. Write the latitude first, followed by the longitude (e.g., 36°35'00.10"S, 68°00'10.20"W).

# Organization

# First page

The first page of each manuscript must include the following items in the order given:

- *Title:* It should be concise and informative, and include the species involved (with scientific name) when applicable.
- Author names and affiliations: Please give full name details for all authors and mark the corresponding address with an upper-case superscript letter. List the affiliation addresses of all authors (where the actual work was done) below the names, starting with the corresponding lower-case superscript letter. Provide the full postal address of each affiliation, including the institution's section or department, the institution's full name, street and number, postal code, city, country name and, if available, the email address of each author.
- Present/permanent address: If an author has moved since the work described in the article was done, a "present address" may be indicated and marked with an upper-case superscript letter after the author's name.
- Corresponding author: Please indicate with a superscript Latin number who is willing to handle correspondence at all stages of the review, publication, and post-publication process.

### **Second page**

- *Abstract:* Please provide an abstract of no more than 250 words in English in the case of regular articles, and no more than 150 words for short communications and field notes. Manuscripts submitted in Spanish or Portuguese must include an abstract in the original

language, plus an English translation of the title and the abstract. Manuscripts in English must also include a title and an abstract in Spanish or Portuguese. The abstract must be completely self-explanatory and intelligible in itself, and state briefly the purpose of the research, the principal results, and major conclusions. Do not include references or uncommon abbreviations.

- *Keywords:* Please list up to six keywords in the two languages used for the abstract, in alphabetical order and separated by commas, that best describe the nature of your work. Make sure you do not repeat words that are already included in the title. Include the scientific and/or common name of the principal species studied in case they are not included in the manuscript title.

### Main body of the manuscript

The standard format consisting of Introduction, Materials and Methods, Results, and Discussion should be used for full-length manuscripts. Short communications and field notes should not be divided into sections.

#### Headings

Three classes of headings are allowed within the text of a manuscript:

- First-level headings (the most inclusive) are written in **bold**, justified to the left, and not followed by punctuation.
- Second-level headings are written in *italics*, **not** bold, justified to the left, and are not followed by punctuation. The corresponding text starts on the next line, as a new paragraph.
- Third-level headings are written in *italics*, **not** bold, justified to the left, and end with a period. The paragraph text follows on the same line.

Lists of items within the text should be preceded by Arabic numerals followed by a period (1.) or by bullets (•).

#### Introduction

The introduction should state the objectives of the work and provide an adequate background.

#### **Materials and Methods**

This section should include sufficient detail to allow the study to be replicated. Whenever applicable, study sites should be clearly identified and geographical coordinates included. Adequate references should be included for methods that have already been published elsewhere. Commonly used statistical methods need not be described in detail, but adequate references should be provided.

#### Results

This section should highlight the key results and not repeat data already included in figures or tables.

#### Discussion

The discussion may be combined with the Results. It should interpret the results in the context of other published work. In addition, it should discuss the significance or the implications of the findings for species or ecosystem conservation.

### **Conclusions**

Where applicable, significant conclusions may be included to highlight the most important findings.

#### **Acknowledgements**

Acknowledgements follow the Discussion or Conclusions section and precede the Reference section. Information on grants received should be included here.

### References

Please ensure that every reference cited in the text is also listed in the reference section, and vice-versa. Unpublished results and personal communications should not be included in the Reference list, but rather be cited in the text.

#### *In-text citations*

Single author citations should include only the author's surname and the year of publication, separated by a comma. Citations with two authors should list both authors' names, separated by the *et* sign (&). In the case of three authors or more, the first author's surname is followed by *et al.* (in italics).

Groups of references should be listed first chronologically, then alphabetically. In this case, citations should be separated by semicolons.

Examples: (Wetzel, 1985a, b; Nowak, 1991; Anacleto, 1997; Emmons & Feer, 1999; Noss *et al.*, 2004). McDonough & Loughry (2001) stated that...

When citing a book that has been edited by an institution whose name is usually abbreviated, use the abbreviation in the in-text citation. In the References section, write the abbreviation, followed by a dash and the institution's entire name.

Example: the in-text citation (MMA, 2008) is listed in the References as MMA – Ministério do Meio Ambiente do Brasil. 2008.

Textual quotations must be reproduced exactly as they appear in the original work and be enclosed in chevrons (« »). Their source must be indicated by specifying the author, year, and page number in parenthesis in the following format: (author, year:page), e.g. (Wetzel, 1985:14).

### References section

In the References section, citations should be listed in alphabetic order by the first author's surname. Please note that the initials of authors and editors must be separated by a space. If a reference has 7 or more co-authors, write only the name of the first author followed by et al. If there is more than one article by authors whose names appear in the same order in each paper, the articles are listed in chronological order. Articles with multiple authors but the same lead author are arranged together, alphabetically by second, and then by third, author, etc. Articles by the same authors in the same year are assigned a letter suffix (e.g., 1985a).

Only the first word and proper nouns in titles of articles and books begin with a capital letter. Names of journals should not be abbreviated. Only mention issue numbers of a volume if the pages of the latter are not numbered consecutively from the first issue on.

### Examples:

Journal publication:

Vynne, C., R. B. Machado, J. Marinho Filho & S. K. Wasser. 2009. Scat-detection dogs seek out new locations of *Priodontes maximus* and *Myrmecophaga tridactyla* in Central Brazil. Edentata 8–10: 13–14.

McDonough, C. M., S. A. McPhee & W. J. Loughry. 1998. Growth rates of juvenile nine-banded armadillos. Southwestern Naturalist 43: 462–468.

Please note that in this last example, the issue number (4) has not been included because the pages of volume 43 are numbered consecutively from its first volume on. In other words, instead of writing 43(4): 462–468, only 43: 462–468 is used.

#### Book:

MMA – Ministério do Meio Ambiente do Brasil. 2008. Livro vermelho da fauna brasileira ameaçada de extinção. 2 Volumes. Fundação Biodiversitas, Belo Horizonte. 1420 pp.

Montgomery, G. G. 1985. The evolution and ecology of armadillos, sloths, and vermilinguas, Smithsonian Institution Press, Washington and London. 451 pp.

## Book chapter:

Superina, M., F. Miranda & T. Plese. 2008. Maintenance of Xenarthra in captivity. Pp. 232–243 in: The biology of the Xenarthra (S. F. Vizcaíno & W. J. Loughry, eds.). University Press of Florida, Gainesville.

Wetzel, R. M. 1985. The identification and distribution of recent Xenarthra (=Edentata). Pp. 5–21 in: The evolution and ecology of armadillos, sloths, and vermilinguas (G. G. Montgomery, ed.). Smithsonian Institution Press, Washington and London.

#### Proceedings and congress abstracts:

Noss, A. 1999. La sostenibilidad de la cacería de subsistencia izoceña. P. 80 in IV Congreso Internacional sobre manejo de fauna silvestre en Amazonia y Latinoamérica, Asunción.

Rogel, T. G., C. E. Pellegrini, J. A. Agüero, A. R. Bamba, P. C. Paez & E. M. Virlanga. 2005. Caracterización de la dieta de dasipódidos del chaco árido riojano. P. 128 in XX Jornadas Argentinas de Mastozoología (SAREM, ed.), Buenos Aires.

#### Dissertation or Thesis:

Abba, A. M. 2008. Ecología y conservación de los armadillos (Mammalia, Dasypodidae) en el noreste de la provincia de Buenos Aires, Argentina. Doctoral Thesis, Universidad Nacional de La Plata, La Plata. 246 pp.

Steuber, J. G. 2007. The cost of an emerging disease: *Mycobacterium leprae* infection alters metabolic rate of the nine-banded armadillo (*Dasypus novemcinctus*). Master's Thesis, University of Akron, Akron. 31 pp.

### Website:

IUCN. 2020. The IUCN Red List of Threatened Species 2020-2. International Union for Conservation of Nature and Natural Resources. <a href="http://www.iucnredlist.org/">http://www.iucnredlist.org/</a>>. Accessed on 20 July 2020.

Anacleto, T. C. S., F. Miranda, I. Medri, E. Cuellar, A. M. Abba & M. Superina. 2014. *Priodontes maximus*. The IUCN Red List of Threatened Species 2014: e.T18144A47442343. https://dx.doi.org/10.2305/IUCN.UK.2014-1.RLTS.T18144A47442343.en. Accessed on 22 July 2020.

#### **Tables**

Please submit tables in a separate file, and never within the main body of the text. Type each table on a separate page and number them consecutively in Arabic numerals. List the table captions on a separate page at the end of the manuscript, following the Reference section. Table captions should be concise and descriptive enough to be able to stand alone. Please omit all vertical lines in tables; place single horizontal lines under the title, under the column headings, and at the bottom of the table. Do not use footnotes.

### **Figures**

Articles may include high-quality photographs (color or black and white), figures, and maps. If maps are included in the manuscript, they should be surrounded by a border with geographic coordinates in degrees (e.g., 36°S) or degrees and minutes (e.g., 36°10'S). They should also include a map showing the location of the study site within the country and the continent. List the figure captions on a separate page of the manuscript, following the Table captions. Please use vector instead of bitmap images whenever possible (e.g., for maps and diagrams), and submit them in any of the following electronic file formats: AI, EPS, SVG, CDR, PDF. Bitmap (or raster) images are more appropriate for photographs and drawings; they should have a resolution of 200 DPI and a width of 17 cm. Please submit them as uncompressed JPG, PNG, TIF, PSD, CPT or PDF. All figures should be submitted in separate files, with the file name referring to the corresponding figure number.

# Manuscript submission

Manuscripts should be submitted to the Editors in electronic format using the following email address: <journal@xenarthrans.org>. Please remember to submit the main text in DOCX, DOC or RTF format, the tables in a separate DOCX, DOC or RTF file, and each figure as an individual file.

Correspondence regarding your manuscript should be directed to the handling editor or the Editor-in-Chief: Mariella Superina, IMBECU - CCT CONICET Mendoza, Av. Ruiz Leal s/n, Parque Gral. San Martín, Mendoza (5500), Argentina, Phone (+54)261-5244160). E-mail <journal@xenarthrans.org>.
